

# Bayco Horse Fencing

1) **SAFETY.** Always wear gloves and goggles when working and observe the necessary precautions when tensioning

2) **STEEL OR WOOD DROPPERS** can be used with Bayco, however the Bayco must be protected from coming in contact with the dropper. Use fastenings made from a flexible synthetic material eg. plastic electric fencing insulators. Droppers should be used in the same manner as when erecting metal wire fences. It should be noted that the more droppers that are utilised the more rigid and secure the fence becomes.

3) **DISPENSING.** Open carton and remove ties from coil. Thread end of coil through large hole in centre of carton. Close carton. Dispense by pulling Bayco through hole

## 4) CORRECT METHOD FOR ATTACHMENT OF BAYCO FENCING TO POSTS.

4.A) The fencing is wound three times around the post leaving 60cm in excess for knotting as per following instructions. Wedge screwdriver or similar spacer between the Bayco and the fence post to allow room to secure the loose end as per section c.

4.B) The 60cm end piece is wound about five times around the fencing, keeping each turn close to the one before.

# Bayco Horse Fencing Continue

4.C) Then wind five times back again by the same method as in B and the end piece is pushed through between the wound fencing and the end post to secure the knot. The screwdriver can then be removed. If required, a staple can be inserted around the loose end for further security.

5) BAYCO FENCING SHOULD HAVE 3% EXTENSION.

Normal smooth jaw wire strainers can be used for tensioning: however care should be taken to tension slowly. For every 100 metres of non-tensioned fencing stretch out three metres of Bayco to obtain the required 3% extension. A simple method to gauge the tension you are applying is done by estimating the strain, eg. 3% equals three metres over 100 metres. Simply pace this out against the Bayco. Mark the Bayco with a soft pen or tape or peg and then proceed to tension the product up to this mark.

Product Code: A6061

Warranty: 10 years
